Bedroom Wall B — Options

Four versions of the 121-inch wall shared with the living room, for Tisa to choose from. All keep the packet's heights, profile, chair rail, colour and the B3 outlet. Nothing changes in the packet until Tisa picks one.

DECIDED — Tisa chose Option 3 on 2 Nov 2026, 17:36. Issued as Bedroom Wall B Revision B (English + separate Spanish).

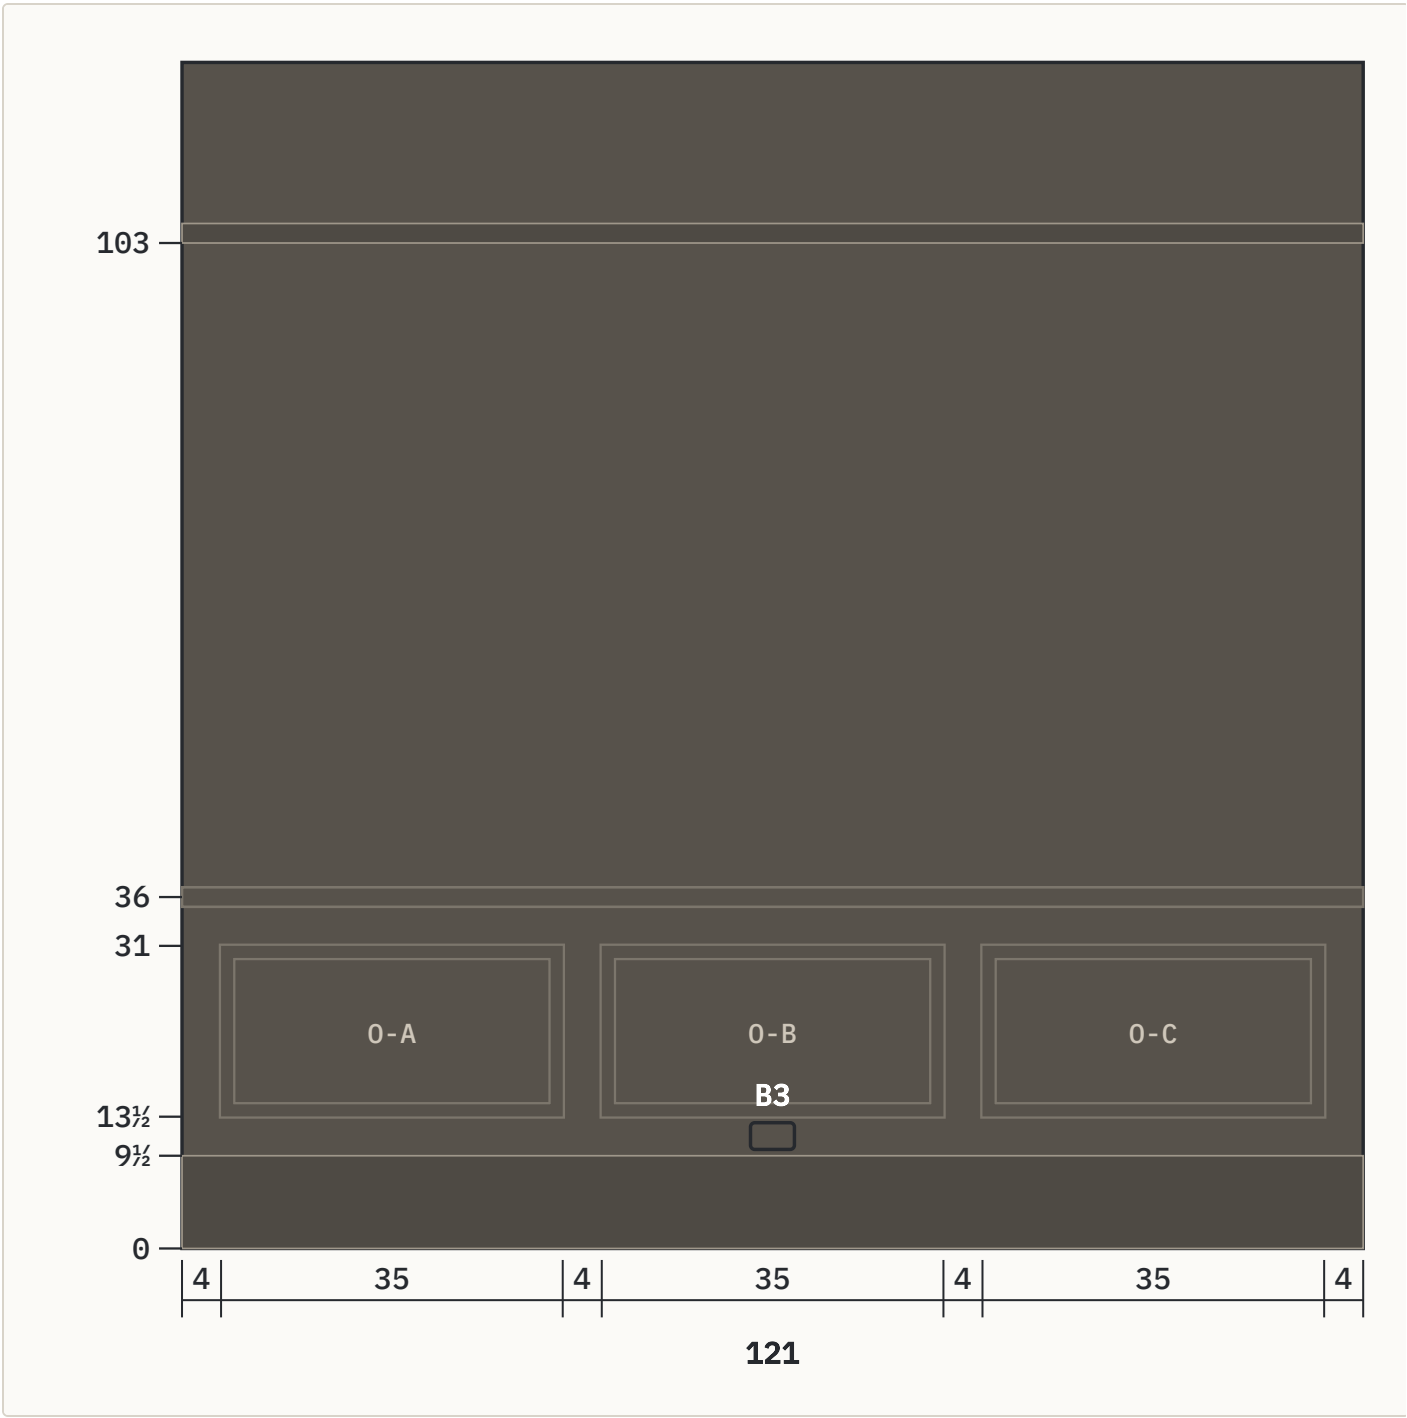

Why revisit Wall B

- Wall A and Wall B face each other across the bed. With the headboard on A, **B is the wall you look at from the bed**, yet the current design gives it the least detail: a bare upper wall.
- The current three 35-in frames don't share any width with Wall A (19 / 67 / 19), so the two walls don't read as a pair.
- Wall B is also the natural TV wall in a rental bedroom, and the current plan has no power for a wall-mounted TV.

Useful finding

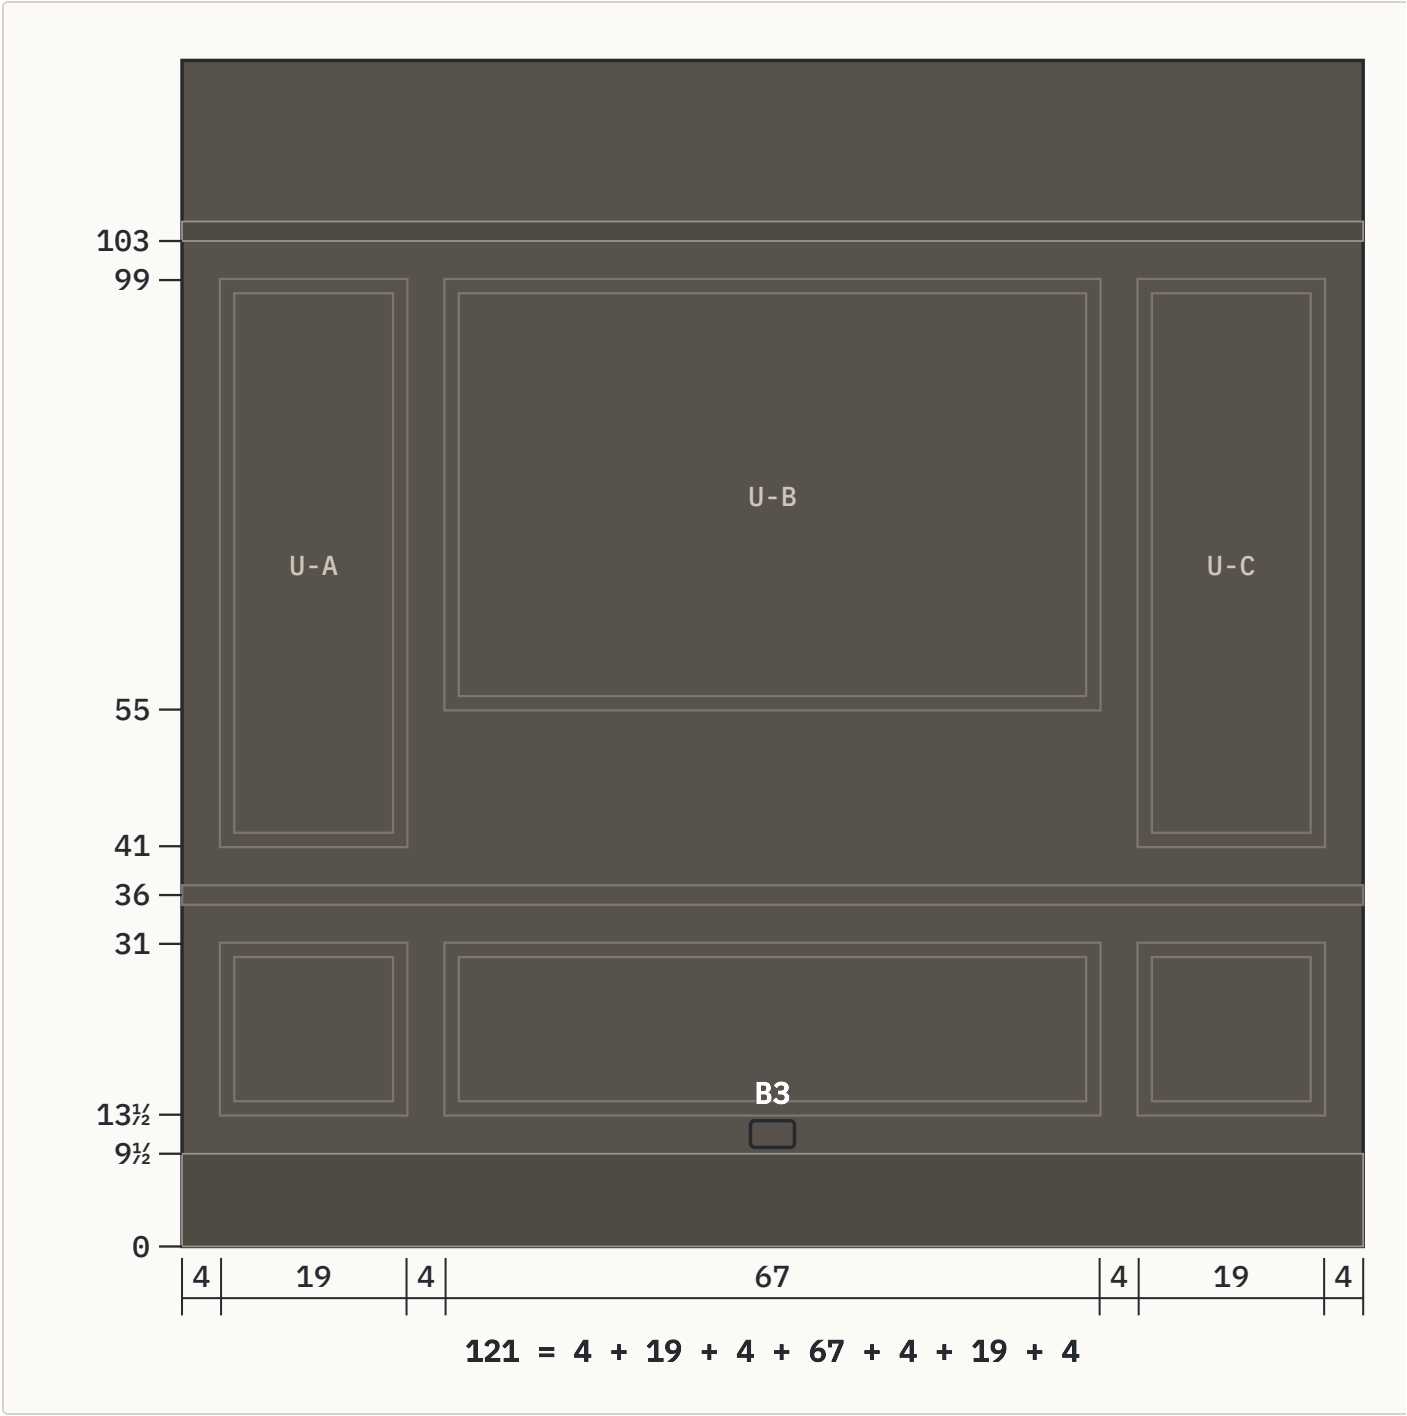

- Wall A's frames total **19 + 67 + 19 = 105**. On Wall B, 121 − four 4-in spaces = **105**. Wall B can carry Wall A's exact frame widths with the packet's 4-in margins, so the two walls become true mirror images.
- The centre of B's middle bay lands at 4 + 19 + 4 + 33½ = **60½**, exactly where the packet already puts outlet B3. It stays put in every option.

0 Current packet (Oct 12)

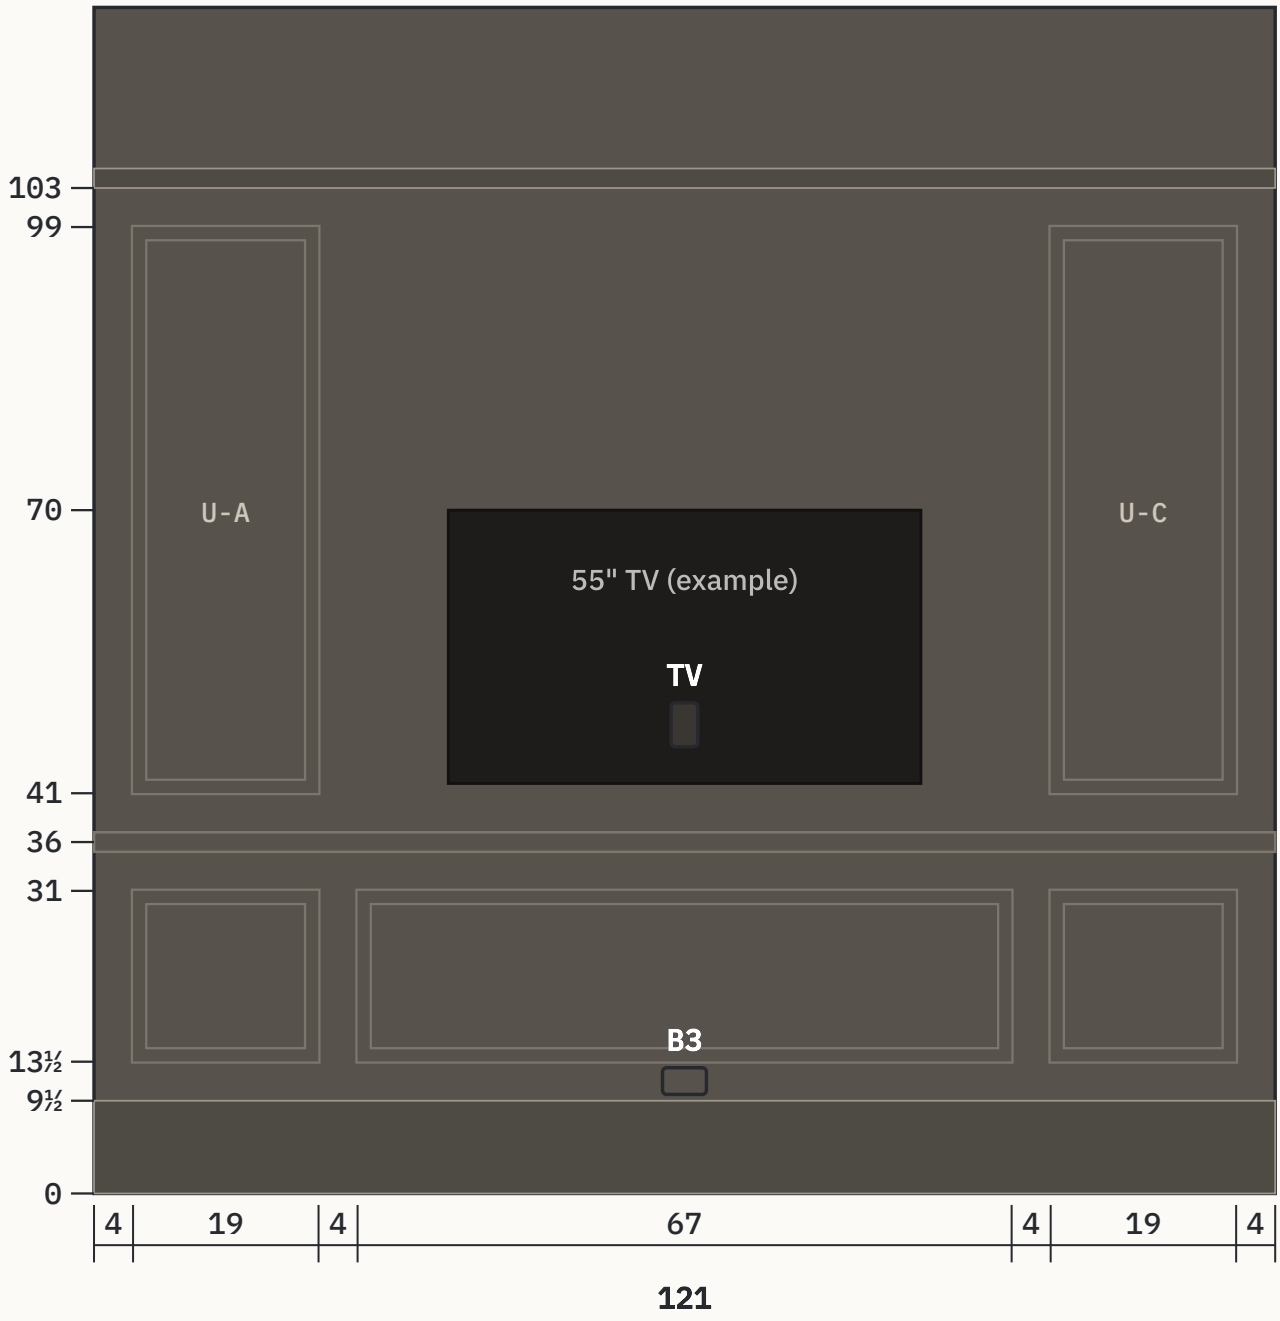

Three lower frames 35 × 17½, plain above the chair rail. Quiet, but the upper 62 in of the wall is empty, and nothing ties it to Wall A.

1 Option 1 — Mirror Wall A (recommended)

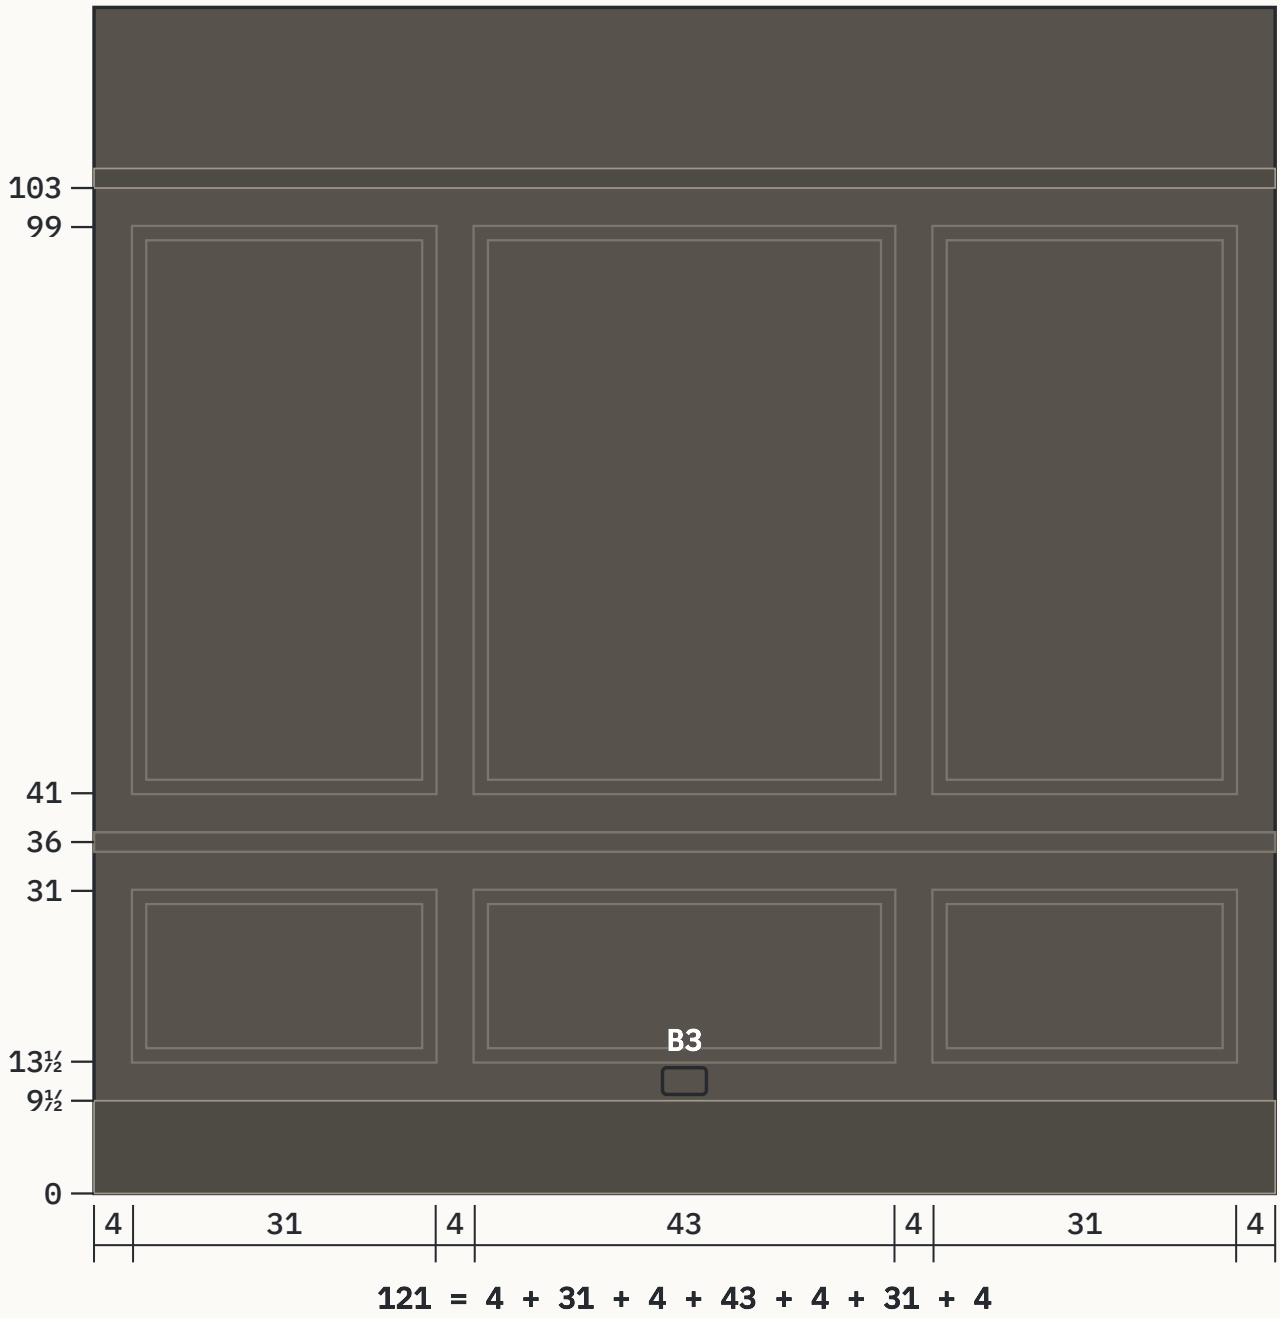

- **Same six frames as Wall A:** uppers 19 × 58, centre 67 × 44 (55–99), lowers 19 / 67 / 19 × 17½; margins and gaps 4 in.
- Lying in bed you see the same composition you lean against, which makes the room feel built-in and expensive. Same cut lengths as A: no new piece sizes.
- The 41–55 band under the centre frame takes a dresser or a low console without hiding any moulding. Art can hang inside the centre frame.
- **Cost:** about 44 ft more moulding than the current Wall B. By my count, 21 eight-foot boards for both walls (including the spare) versus the packet's 14: 7 more, ≈ $72 at the packet's $10.28.

2 Option 2 — Mirror Wall A, open centre for a TV

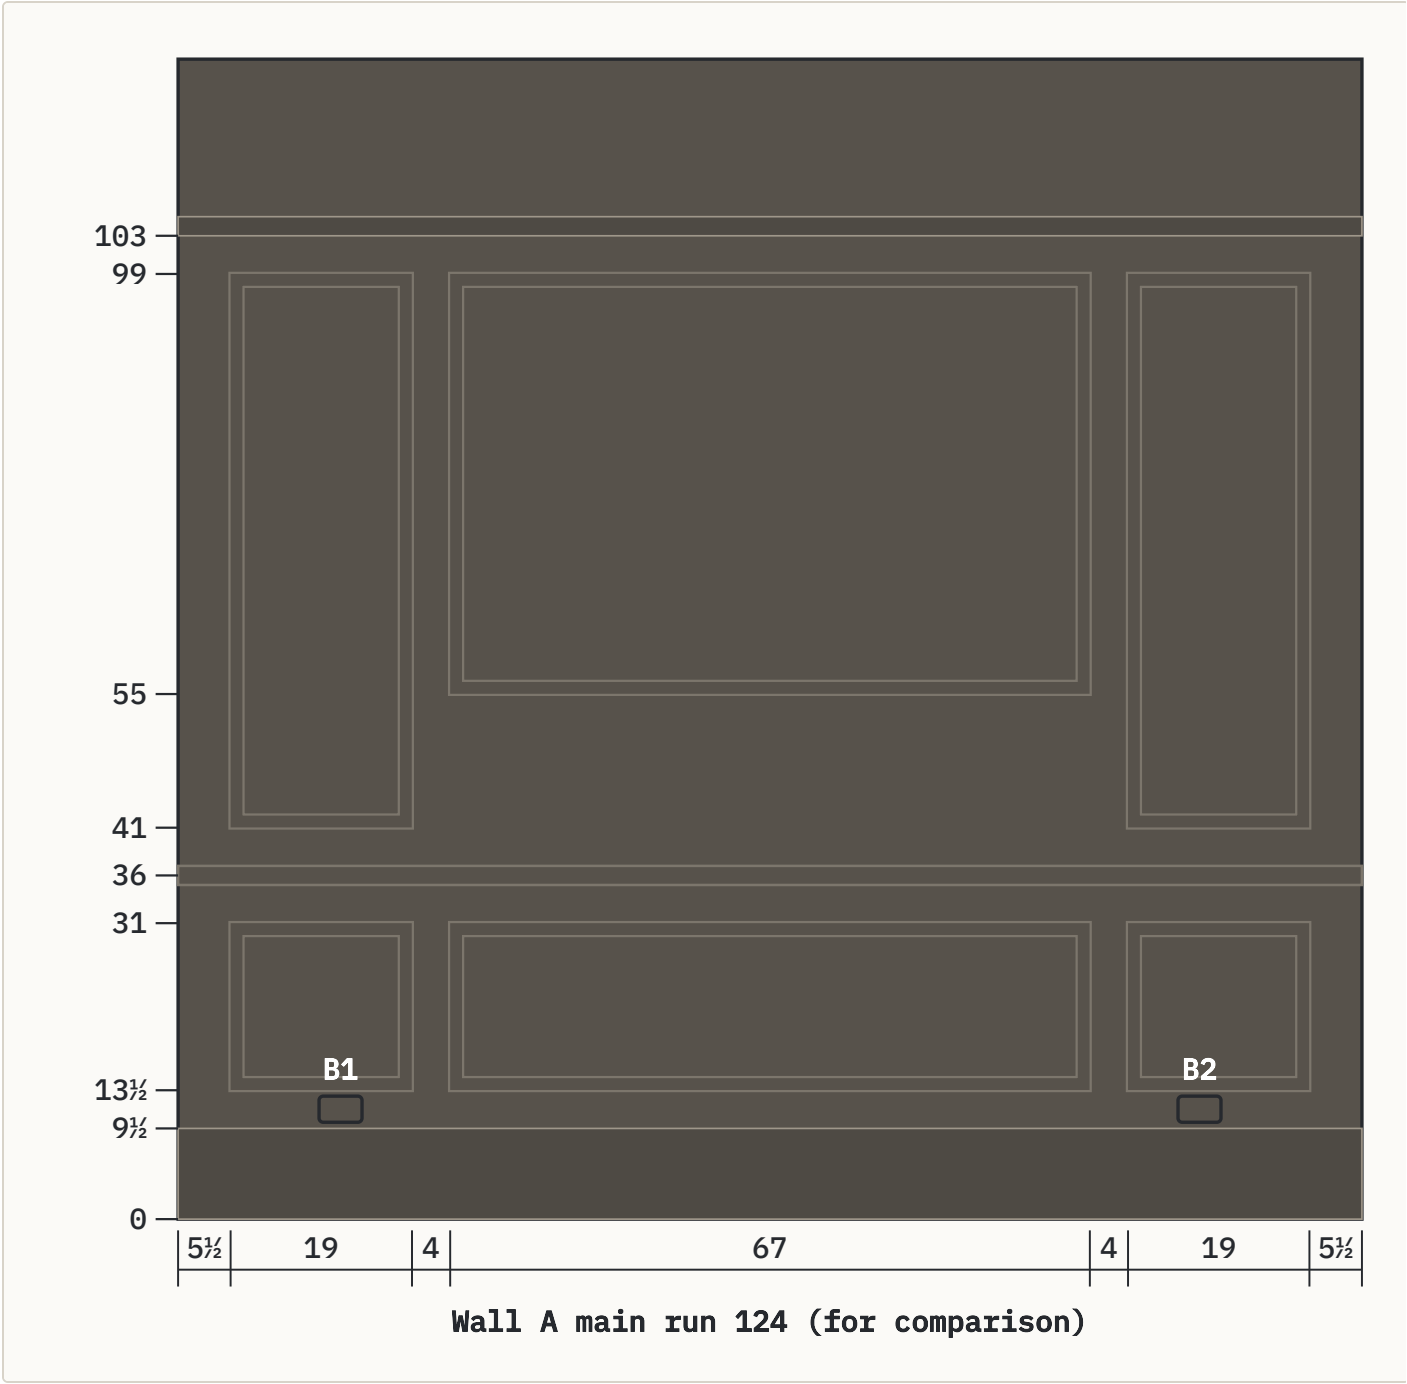

- Same as Option 1 but **no upper centre frame**: a 67-in-wide plain field between the tall side frames holds a wall-mounted TV up to about 55 in.
- Adds a recessed power + low-voltage box behind the TV, centred at x 60½, about 48 in AFF. It needs an electrician check, and it is a new box not in the whole-unit plan.
- Viewing height suits someone sitting up in bed: a 55-in TV centred around 56 in spans about 42–70.
- Choose this if the unit should be marketed TV-ready; otherwise Option 1 is calmer.

3 Option 3 — Three equal tall bays

- Uppers and lowers in a 31 / 43 / 31 rhythm, all uppers 41–99. Matches the living/dining two-tier look rather than Wall A.
- More formal; reads as a different wall from A, so the room has two compositions instead of one.
- Needs new cut sizes (31, 43, 58), so it doesn't simplify the cut list.

A Wall A, unchanged — for comparison

Packet Wall A: 5½-in end margins on its 124-in run. Option 1 copies its frames onto Wall B with 4-in margins.

☑ To lock an option

- Tell me 1, 2 or 3, or a mix (e.g. Option 1 uppers with a lower centre outlet).
- I then issue the bedroom packet as a revision (English, then a separate Spanish edition). That covers the Wall B sheet, the frame schedule, cut list and board count, and materials. The October 12 packet moves to `_superseded`.

- Option 2 also goes to the electrician for the TV box.
